# XyronQ

Intelligent Platform for Warehouse Configuration  
& Operations

## Transform Warehouse Automation with Speed, Precision, and Flexibility

Deploying automated warehouse systems is often slow, fragmented, and expensive. XyronQ changes that.

Built on the robust ArconQ framework, XyronQ enables **faster design, smarter configuration, and seamless deployment** of warehouse automation - all in one integrated platform.

# What is XyronQ?

XyronQ is the intelligent control hub for designing, simulating, and orchestrating automated warehouses - from concept to go-live. It offers a standardized, fully configurable environment to map assets, define material flows, and streamline operations with precision.

## Key Capabilities:

### **Visual Warehouse Design:**

Create a digital representation of your physical space. Intuitively build 2D layouts with common elements and instantly visualize them in 3D a digital twin of your warehouse.

### **Integrated Fleet Management:**

Easily manage and orchestrate Automated Guided Vehicles (AGVs) and Autonomous Mobile Robots (AMRs) within your warehouse model for smooth, automated operations.

### **Modular Component Library:**

Use ready-made components or define custom ones to match your exact operational needs.

### **Simplified System Integration:**

Connect with PLCs, ERPs, and more through a dedicated Communication Hub using standard industrial protocols.

### **Low-Code/No-Code Approach:**

Empower domain experts to configure systems with little to no coding - cutting reliance on developers.

### **Extensible & Future-Ready:**

Optimised for warehouse automation, but flexible enough to scale across any industrial system with similar configuration and control needs.

# Key Benefits for your Business:

## **Faster Deployment**

Speed up projects with reusable modules and visual tools.

## **Consistent & High-Quality Results**

Eliminate errors with standardized components and reliable architecture.

## **Total System Visibility**

Real-time 2D/3D views provide a digital twin of your facility and processes.

## **Agile Reconfiguration**

Update workflows, layouts, or equipment - no major rework needed.

## **Lower Costs**

Slash development and maintenance through platform standardization.

## **Empowered Experts**

Let operations teams model and adjust systems directly - no coding required.

# Layered Architecture:

## Physical

Define and visualize the physical layout of your facility, equipment and storage zones.

## Transport

Configure the logical connections and possible movement paths for materials.

## Process

Define the business rules and workflows for various warehouse operations and exception handling.

## Communication

Manage data exchange with external systems, control devices, and IoT-interfaces.

## Ready to Modernize Your Warehouse?

XyronQ brings speed, clarity, and control to warehouse automation projects - without the complexity of traditional approaches.
