

Designed by Experts. Powered by Intelligence. Verified in 3D.

# LogisQ-WES

## The next generation of warehouse execution systems

Step into a new era of intralogistics – where warehouse execution is no longer hardcoded by developers, but designed and configured by domain experts.

LogisQ-WES empowers system integrators to build powerful, tailored execution systems **without full-stack teams**. Visual modeling, AI assistance and a real-time digital twin come together in one seamless solution.

# From visual design to live deployment – without coding.

With LogisQ-WES, domain experts take full control of the solution lifecycle. Using intuitive tools and built-in AI assistance, warehouse logic is visually modeled, simulated and deployed – all without touching code.

## Design Visually

Create and connect process blocks on an intuitive design board.

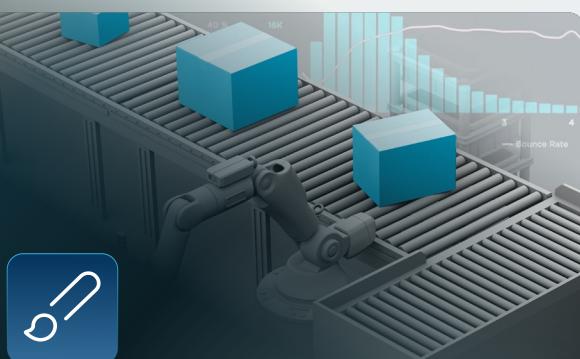

DevyonQ

## Let AI Assist

DevyonQ configures message handling, routes, and runtime logic.

DevyonQ

## Simulate in 3D

Use the digital twin for logic validation and visual walkthroughs.

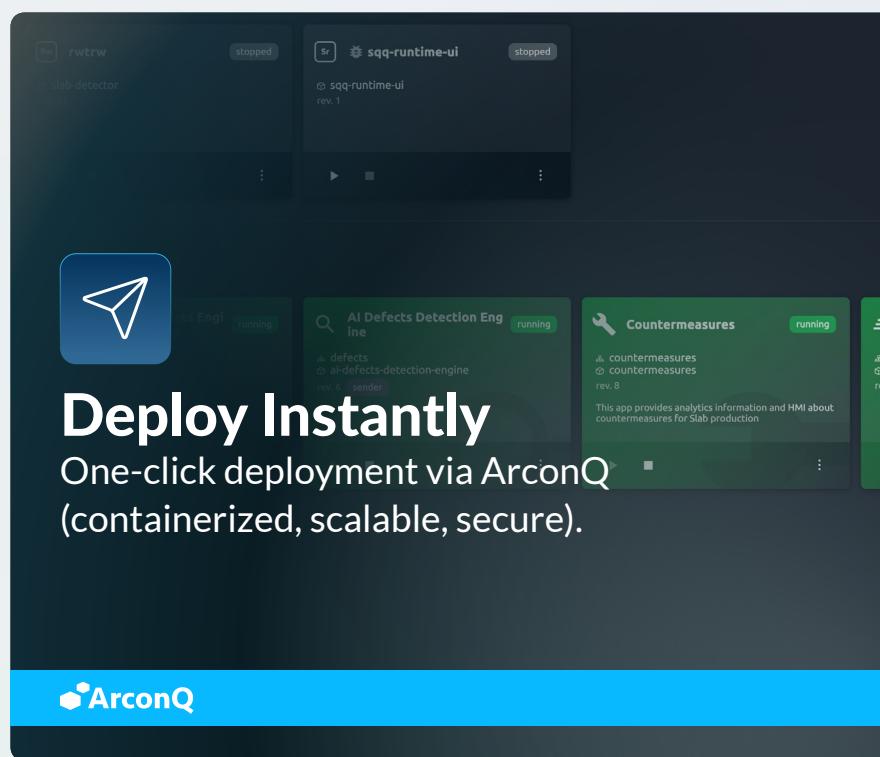

LogisQ

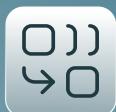

## Deploy Instantly

One-click deployment via ArconQ (containerized, scalable, secure).

ArconQ

# Everything you expect from a WES — and so much more.

Inbound, outbound, and cross-docking workflows

Task control for AGVs, conveyors, and stacker cranes

Slotting, consolidation, and empty pallet handling

Exception management and dynamic routing

ERP integration and PLC communication

## Advanced features only we deliver:

AI-based process configuration (DevyonQ)

Runtime diagnostics, KPIs, and historical traceability

Domain-driven design with reusable process libraries

Digital twin simulation before go-live

Visual modeling of process and transport layers

Cloud-native deployment with zero-downtime updates

## Trusted by:

# Simulate before you deploy. Train before you operate.

The integrated 3D digital twin allows you to validate every aspect of your system before it goes live – no surprises, no downtime. Visualize pallet movements, route logic, crane behavior and exception handling in a live simulation environment.

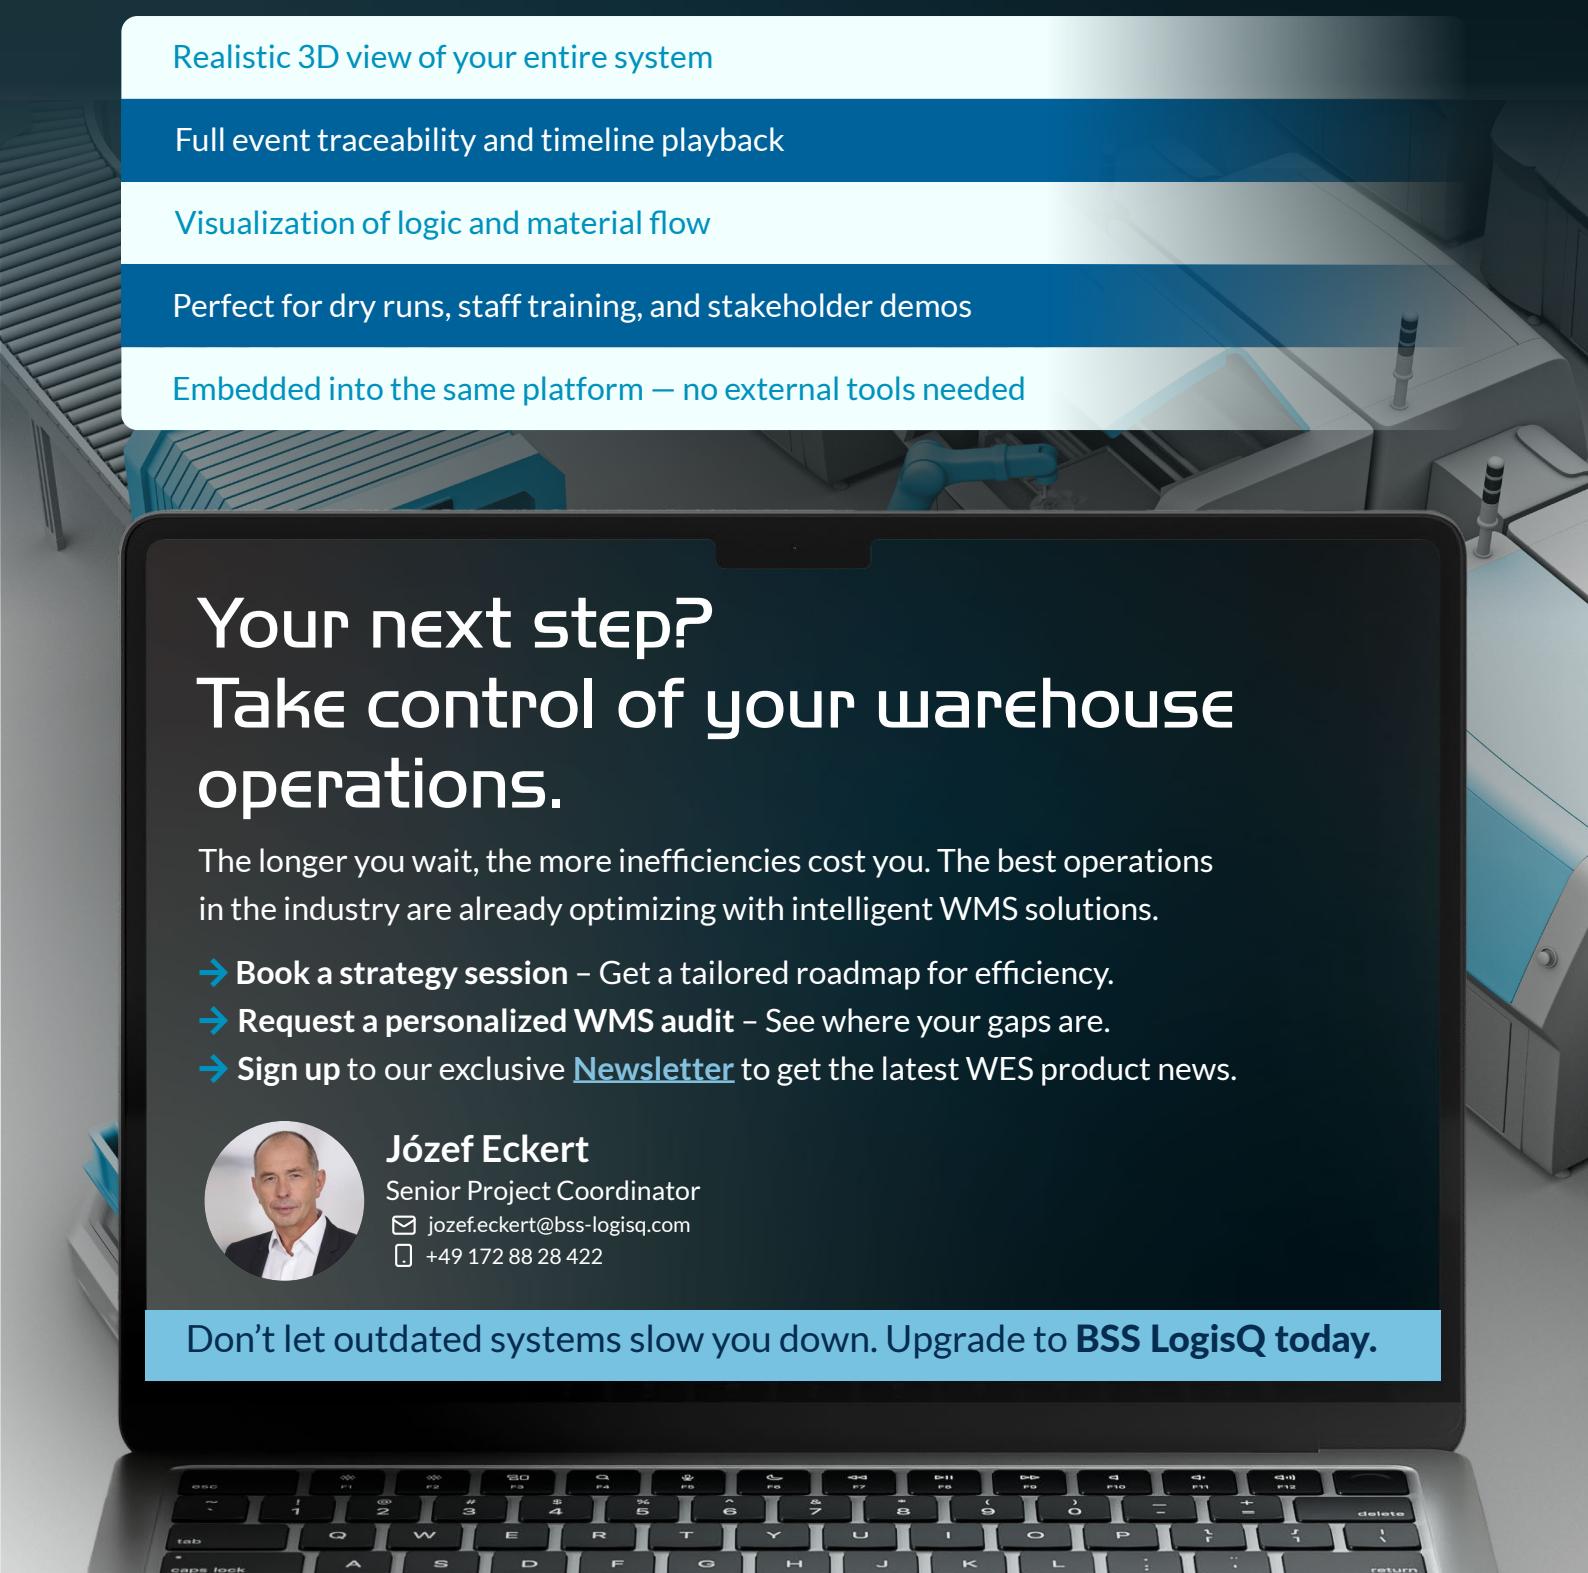

Realistic 3D view of your entire system

Full event traceability and timeline playback

Visualization of logic and material flow

Perfect for dry runs, staff training, and stakeholder demos

Embedded into the same platform – no external tools needed

Your next step?  
Take control of your warehouse operations.

The longer you wait, the more inefficiencies cost you. The best operations in the industry are already optimizing with intelligent WMS solutions.

- **Book a strategy session** – Get a tailored roadmap for efficiency.
- **Request a personalized WMS audit** – See where your gaps are.
- **Sign up to our exclusive [Newsletter](#)** to get the latest WES product news.
